

Plungerlift

Multi Products Company

Petro Tech Controller

One of the most efficient ways to produce natural gas is to use the formation pressure to cycle the plunger lift system. Petro-Tech is a full service differential pressure plunger lift controller designed to prevent lost production due to excessive liquid loading.

Petro-Tech: Rugged Reliability

Built on proven Multi pressure controller algorithms and technology, Petro-Tech delivers "best in field" performance.

- Single knob accesses menu-driven interface; press to select; turn to scroll options or navigate thru menus
- Fail Safe Reliability
- Manual or automatic operation
- Pressure and time control combinations are available
- Industry-first easy log retrieval and data exchange with a USB memory stick (Flash or thumb drive available)

The unit includes three pressure transducers that monitor the casing, tubing, and the flow line or gathering system pressure. The data obtained is used to adjust the plunger lift well to perform optimally under existing conditions, and to prevent lost production from liquid loading.

Simple set up and no special ongoing programming or data entry is necessary to begin successful operation.

SALES/SERVICE LOCATIONS

Multi Products Co. Headquarters

7188 S.R. 39 East • Millersburg, OH 44654

800-777-8617 or 330-674-5981

FAX: 330-674-2125

Home, PA

204 Oxhill Rd.
