Plungerlift

Introduces
the

PUMP-MAX

Automated
Pumping Unit
Engine Control...

FEATURES

- Adaptable to any natural gas powered engine using electric start.
- Configurable on/off cycles in interval mode real time clock cycles with day of week black out in automatic mode.
- Maintenance schedule with cycle hold.
- Manual safety override.
- Historical retention of cycle run times, successful/failed cycles and error log.
- Speed control allows...
 - engine to warm-up and cool down at idle RPM.
 - engine to run loaded cycle in RPM range for required proper cooling and oiling.
 - use of centrifugal clutch.

- Centrifugal clutch
 - Only requires change in engine speed to engage and disengage.
 - Industrial grade machine clutch (not lawnmower parts)
 - Soft clutch engagement reduces stress on belts, engine bearings, gear box, rods and pump.
 - Adapted to any engine with speed control, no minimum sized charging system required.
- Gear reduction to meet stroke per minute needs.
- Safety cage with belt guards to meet OSHA specifications.
